

UNITED STATES DISTRICT COURT  
SOUTHERN DISTRICT OF NEW YORK

GE TRANSPORTATION PARTS, LLC,

Plaintiff,

—v—

CENTRAL RAILWAY MANUFACTURING, LLC,

Defendant.

Case 1:19-cv-04826-AJN

**STIPULATION AND ORDER CONCERNING THE PRODUCTION OF  
ELECTRONICALLY STORED INFORMATION AND DOCUMENTS**

Plaintiff Wabtec Transportation Systems, LLC, f/k/a GE Transportation Parts, LLC (“Plaintiff”) and Defendant Central Railway Manufacturing, LLC (“Defendant”) (collectively, the “Parties”) jointly stipulate to the following protocol for the production of Documents and ESI, as defined below, pursuant to Federal Rules of Civil Procedure 26, 33, and 34. This Order shall apply to the production of hard-copy and electronic documents in this litigation:

**I. PURPOSE**

1. The production of documents and ESI by the Parties also shall be subject to the Stipulated Confidentiality Order. The Parties reserve all objections under the Federal Rules of Civil Procedure, the Federal Rules of Evidence, and all applicable authority concerning matters other than as addressed in this Order. Nothing in this Order shall be interpreted to require production of irrelevant information or relevant information protected by the attorney-client privilege, work-product doctrine, or any other applicable privilege or immunity. The Parties do not waive any objections to the discoverability, admissibility, or confidentiality of documents or ESI. Nothing in this Order shall be interpreted to supersede

the provisions of orders governing confidentiality or privilege entered by the Court in this litigation, unless expressly provided for in such an order.

## **II. DEFINITIONS**

2. The following definitions apply to this Order:

a. “Confidentiality Designation” means the legend affixed to Documents or ESI for confidential or highly confidential information as defined by, and subject to, the terms of the order concerning confidentiality agreed to and/or entered by the Court in this litigation. *See* ECF No. 80.

b. “Document” is defined to be synonymous in meaning and equal in scope to the usage of this term in Rules 26 and 34 of the Federal Rules of Civil Procedure and in the Uniform Definitions in Discovery Requests in Rule 26.3 of the Local Rules of the United States District Courts for the Southern and Eastern Districts of New York (“Local Rules”). The term “document” shall include hard-copy documents, electronic documents, and ESI, as defined herein.

c. “Electronic Document or Data” means documents or data existing in electronic form at the time of collection, including but not limited to: e-mail or other means of electronic communications, word processing files (e.g., Microsoft Word), computer slide presentations (e.g., PowerPoint or Keynote slides), spreadsheets (e.g., Excel), text messages, and image files (e.g., PDF).

d. “Electronically stored information” or “ESI,” as used herein, has the same meaning as in Rules 26 and 34 of the Federal Rules of Civil Procedure and includes Electronic Documents or Data, and computer-generated information or data, stored in or on any storage media located on computers, file servers, disks, tape, USB drives, or other real or virtualized devices or media.

e. “Extracted Full Text” means the full text that is extracted electronically from native electronic files, and includes all header, footer, and document body information.

f. “Hard-Copy Document” means documents existing in paper form at the time of collection.

g. “Hash Value” is a unique numerical identifier that can be assigned to a file, a group of files, or a portion of a file, based on a standard mathematical algorithm applied to the characteristics of the data set. The most commonly used algorithms, known as MD5 and SHA, will generate numerical values so distinctive that the chance that any two data sets will have the same Hash Value, no matter how similar they appear, is less than one in one billion.

h. “Load files” means an electronic file containing information identifying a set of paper-scanned images, processed ESI, or native format files, as well as the corresponding Extracted Full Text or OCR text files, and containing agreed-upon extracted or user-created metadata, as well as information indicating unitization (i.e., document breaks and document relationships such as those between an email and its attachments) used to load that production set into the document review platform of the Party receiving a production (“Receiving Party”), and correlate its data within that platform. A load file is used to import all image, native, and text files and their corresponding production information into a document database. The Producing Party shall produce a load file for all produced documents with each particular production in accordance with specifications provided herein.

i. “Media” means an object or device, real or virtual, including but not limited to a disc, tape, computer, or other device on which data is or was stored.

j. “Metadata” means: (i) information embedded in or associated with a native file that describes the characteristics, origins, usage, and/or validity of the electronic file; (ii)

information generated automatically by the operation of a computer or other information technology system when a native file is created, modified, transmitted, deleted, or otherwise manipulated by a user of such system, (iii) information, such as Bates numbers, redaction status, privilege status, or confidentiality status created during the course of processing documents or ESI for production, and (iv) information collected during the course of collecting documents or ESI, such as the name of the media device on which it was stored, or the custodian or non-custodial data source from which it was collected. Nothing in this order shall require any party to manually populate the value for any metadata field.

k. “Native Format” or “native file” means the format of ESI in which it was generated and/or used by the Party Producing ESI or documents (the “Producing Party”) in the usual course of its business and in its regularly conducted activities. For example, the native format of an Excel workbook is an .xls or .xlsx file.

l. “Optical Character Recognition” or “OCR” means the optical character recognition technology used to read the text within electronic images of paper Documents and create a file containing a visible, searchable text format of such Documents.

m. “Searchable Text” means the native text extracted from an electronic document and any Optical Character Recognition text (“OCR text”) generated from the electronic image of a paper Document.

### **III. E-DISCOVERY LIAISON**

3. The Parties will identify to each other liaisons who are and will be knowledgeable about and responsible for discussing their respective ESI (“E-discovery Liaisons”). Each Party’s designated E-discovery Liaison(s) will be, or will have access to those who are, familiar with their Party’s respective electronic systems and capabilities and knowledgeable about the technical aspects of e-discovery, including the location, nature,

accessibility, format, collection, search methodologies, and production of ESI in this matter. The Parties will rely on the liaisons, as needed, to confer about ESI and to help resolve disputes without court intervention.

#### **IV. IDENTIFICATION OF DOCUMENTS AND ESI**

4. The Parties agree to meet and confer to discuss any the following, if and as requested by either Party: (i) the identification of the custodial and noncustodial data sources containing potentially relevant ESI for potential collection, review, and production; (ii) additional parameters for scoping the review and production efforts (e.g., application of date ranges, de-NIST'ing, etc.); (iii) potential use and identification of search terms, tools, or techniques; (iv) the identification and production of documents and ESI from custodial and non-custodial sources that do not require the use of search terms, tools, or techniques; (v) the method each Party proposes to use to identify and de-duplicate duplicate documents, and any exceptions to such de-duplication the Party proposes to implement; and (vi) the treatment of non-responsive documents within parent-child families. The initial meet and confer between Plaintiff and Defendant will take place promptly following entry of this Order.

5. The Parties further agree to meet and confer to the extent that this Order imposes any undue burden or expense on any Plaintiff or Defendant with respect to its response to any particular discovery request before that Party incurs the burden or expense. However, in agreeing to this Order, no Party waives or relinquishes any right or interest it may have under the Federal Rules of Civil Procedure, following the meet-and-confer requirement of this paragraph, to seek a protective order from the Court for cost-shifting or apportionment for or allocation of the costs of electronic discovery, without prejudice to the other Party's right to oppose such relief sought through a motion for protective order.

6. Nothing in this order shall be deemed to be a waiver of any Party's right to reasonably seek agreement from the other Party, or a Court ruling, to modify proposed or previously agreed-to search terms, techniques, or tools (including any proposed as supplements).

## **V. DEDUPLICATION**

7. To the extent exact duplicate documents reside within a Party's ESI data set, the Party shall produce only a single, deduplicated copy of a responsive document. "Exact duplicate" shall mean bit-for-bit identity of the document content with exact hash value matches; so-called "near duplicates" will not be included within this definition.

8. To the extent a party de-duplicates its documents, it shall de-duplicate stand-alone documents or entire document families in their ESI sources by the use of MD5, SHA-1, or SHA256 hash values. Where any such documents have attachments, hash values must be identical for both the document plus-attachment (including associated metadata) as well as for any attachment (including associated metadata) standing alone.

9. A Producing Party shall de-duplicate documents across custodians and populate a field of data that identifies each custodian who had a copy of the produced document (the "Duplicate Custodian" field) in addition to a separate field of data identifying the custodian whose document is produced; such de-duplicated documents shall be deemed produced from the custodial files of each such identified custodian for all purposes in this litigation, including for use at deposition and trial. A Producing Party shall use a uniform description of a particular custodian across productions. Multiple custodians in the "Duplicate Custodian" field shall be separated by a semicolon. Entity/departmental custodians should be identified with a description of the entity or department to the extent applicable.

10. No Party shall identify and/or eliminate duplicates by manual review or some method other than by use of the technical comparison using MD5 or SHA-1 hash values outlined above.

11. Hard-Copy Documents containing annotations, handwritten notes, or other information distinct from ESI versions shall not be eliminated as duplicates of ESI.

12. If the Producing Party makes supplemental productions following an initial production, that Party also shall provide with each supplemental production an overlay file to allow the Receiving Party to update the “Duplicate Custodian” field. The overlay file shall include all custodians listed in the “Duplicate Custodian” field in prior productions and any custodians newly identified in the current supplemental production.

## **VI. PRODUCTION FORMAT AND PROCESSING SPECIFICATIONS**

13. Standard Format. Unless otherwise specified in paragraph 14 or pursuant to paragraph 22 below, the Parties shall produce documents in tagged image file format (“TIFF”). TIFFs of ESI shall convey the same information and image as the original document, including all commenting, versioning, and formatting that is visible in any view of the document in its native application. All hidden text will be expanded, extracted, and rendered in the TIFF file and, to the extent possible, the Producing Party will instruct its vendor to force off Auto Date. Any TIFFs produced shall be single-page, 300 DPI, Group IV TIFF files. After initial production in image file format is complete, a party must demonstrate particularized need for production of ESI in its native format.

14. Native Format. Except as provided in paragraph 22 below, the Parties shall produce all spreadsheets, computer slide presentations, audio files, video files, and other file types that cannot be accurately represented in TIFF format in native format; provided, however, that with respect to any computer slide presentation, if (1) all content contained in

the native version, including any hidden notes or other content, can be fully and accurately included the produced version, and (2) all file metadata associated with the presentation, such as the author, creation date, and other available file properties, are provided with the produced version, then there is no obligation to produce the native version of the presentation. The Parties will meet and confer regarding appropriate format of production for databases and structured data (e.g., Microsoft Access, Oracle, or other proprietary databases). For each document produced in native format, a responding Party shall also produce a corresponding cover page in TIFF image format, specifying that the document has been “produced in native format” and endorsed with the Bates Number and Confidentiality Designation, if applicable, which will be inserted into the image population in place of the native file. When the native file is produced, the Producing Party shall preserve the integrity of the electronic document’s contents, i.e., its original formatting and metadata.

15. Color. Documents containing color need not be produced in color, except that (i) word processing documents that contain hidden text, and (ii) certain redacted documents, as further provided in paragraph 22, shall be produced in color in TIFF format. The Producing Party will honor reasonable requests for a color image of a document, if production in color is necessary to understand the meaning or content of the document.

16. Embedded Objects. If documents contain embedded objects that will not render into TIFF in a readable format, the Parties shall extract the embedded objects as separate documents and treat them like attachments to the document to the extent reasonably possible. Images embedded in emails shall not be extracted and produced separately.

17. Load Files. Each production of ESI and Documents shall be accompanied by Concordance or comma delimited load files (.dat and .opt) containing a field with the full

path and filename to files produced in native format and also containing metadata fields identified in Appendix A, to the extent the information is available in the original ESI file and can be extracted without unreasonable burden using standard litigation support processing platforms (except for vendor-generated fields related to the litigation production, such as “BEGDOC”, “ENDDOC”, bases for redaction, and Confidentiality Designations).

18. .Txt Files. For all documents containing extracted full text or OCR text, the Producing Party shall provide searchable document level .txt files (named using the Bates start/”BEGDOC”), which shall reside in the same file directory as the images for such documents.

19. Bates Numbering and Other Unique Identifiers. Every item or file of ESI that is produced shall be identified by a unique page identifier (“Bates Number”) and a Production Volume Number for any storage device (e.g., CD, USB, hard drive) containing such files. All Bates numbers will consist of an Alpha Prefix, followed by a numeric page index. There must be no spaces in any Bates number. Any numbers with less than 8 digits will be front padded with zeros to reach the required 8 digits. All ESI produced in TIFF format shall contain a unique Bates Number on each page of the document, electronically “burned” onto the image at a location that does not obliterate, conceal, or interfere with any information from the source document. If a member of a document family that has otherwise been determined to be responsive cannot be technically processed (e.g., unsupported file format, file corruption, inaccessible password-protected document), those technical problems shall be identified and disclosed to the Receiving Party by production of a Bates-labeled slip sheet that states “Technical issue—file cannot be processed,” along with a log identifying each such file; the associated metadata for the file with the technical problem shall be produced

if technically possible. A Receiving Party thereafter may raise with the Producing Party any questions or concerns, and the Parties shall meet and confer to attempt to resolve any issues.

20. Hard-Copy Documents. Except as otherwise set forth in this paragraph or as agreed to by the Parties, the Parties agree that responsive paper documents shall be converted to single-page TIFF files, and produced following the same protocols set forth in paragraph 13 above, including the production of OCR text that is generated to make such documents searchable. Generally, all paper documents will be scanned and produced electronically, unless a Party establishes good cause for making such documents available via paper and reasonable access is provided to the opposing Party to review the documents directly. In scanning all Hard-Copy Documents, Hard-Copy Documents should be logically unitized. Accordingly, distinct documents should not be merged into a single record, and single documents should not be split into multiple records. In the case of an organized compilation of separate documents (for example, a binder containing several separate documents behind numbered tabs), each of the Hard-Copy Documents should be separately scanned, but the relationship among the documents in the compilation should be reflected in the proper coding of the beginning and ending documents and attachment fields. The Parties will make their best efforts to unitize the documents correctly. Producing Hard-Copy Documents as provided herein does not change their character from Hard-Copy Documents into ESI. For Hard-Copy Documents, the Parties need only populate the following metadata fields: “BEGDOC,” “ENDDOC,” “PROD VOLUME,” “CUSTODIAN,” “SOURCE,” “CONFIDENTIAL,” “REDACTION,” and “COMPANY” fields, as well as “BEGATTACH” and “ENDATTACH” fields where applicable.

21. Confidentiality Designation. To the extent any Document or ESI (or portion thereof) produced as a TIFF image in accordance with this Order is designated as confidential or highly confidential under the Stipulated Confidentiality Order, the Producing Party will brand the required Confidentiality Designation in a corner of any TIFF images representing the produced item and in a consistent font type and size that does not obscure any part of the underlying image or Bates number, to the extent possible.

22. Redactions. A Party may use redactions to protect attorney-client or work product privileges consistent with any orders concerning privilege agreed and/or entered in this litigation. Other than as permitted by this Order or the Stipulated Confidentiality Order, no redactions for relevance may be made within a produced document or ESI item. Any redactions shall be clearly indicated on the face of the document, with each redacted portion of the document stating that it has been redacted and the basis for the redaction, and a metadata field shall indicate that the document contains redactions and the basis for redaction (e.g. "A/C Privilege"). Where a responsive document contains both redacted and non-redacted content, the Producing Party shall produce the remainder of the non-redacted portions of the document and the text/OCR corresponding to the non-redacted portions. Email header information (e.g., date, subject line, etc.) should not be redacted unless there is a good-faith basis to believe it is independently privileged. The production of a document in a redacted form does not affect the Producing Party's obligation to timely assert and substantiate the assertion of privilege over the content in a privilege log. Redacted versions of spreadsheets, computer slide presentations, and word processing files containing hidden text (e.g., track changes, hidden columns, comments, notes, markups, etc.) shall be produced in color in TIFF format. The Parties shall honor reasonable requests for the production of

particular redacted documents in other formats where the TIFF image is not reasonably usable.

23. Parent-Child Relationships. The Parties acknowledge and agree that parent-child relationships within a document family (the association between an attachment and its parent document or between embedded documents and their parent) shall be preserved. Responsive non-privileged electronic documents attached to an e-mail or embedded within other electronic documents and hard-copy documents attached or appended to hard-copy documents must be mapped to their parent by the beginning Bates number and immediately follow that parent file in the sequence of the production. Email attachments and embedded files or links “BEGATTACH” and “ENDATTACH” fields listing the unique beginning Bates number of the parent documents and ending number of the last attachment must be populated for each child and parent document.

24. OCR. OCR software shall be set to the highest quality setting during processing.

25. Deviation from Production Specifications. If a particular document or category of documents warrant a different format, the Parties will cooperate in good faith to arrange for a mutually acceptable production format.

26. Password Protection. In the event any Document or ESI (or portion thereof) produced is password protected, the Producing Party shall make all reasonable efforts to provide the password needed to access the document or ESI.

27. Use at Deposition. Any document produced in native that a party identifies and/or marks as an exhibit at a deposition must include as part of that identification or exhibit the produced corresponding cover page in TIFF image format, endorsed with document’s Bates Number and Confidentiality Designation, as described in paragraph 13 above.

## **VII. PRODUCTION MEDIA**

28. The Producing Party shall produce documents on readily accessible, computer or electronic media, including CD-ROM, DVD, external hard drive (with standard PC compatible interface), via secure FTP site, or such other readily accessible computer or electronic media as the Parties may agree (the “Production Media”). Each piece of Production Media shall be encrypted and assigned a production number or other unique identifying label (“Production Volume Number”) corresponding to the date of the production of documents on the Production Media as well as the sequence of the material in that production, and shall include (a) the name of the litigation and the case number; (b) the identity of the Producing Party; (c) the production date; (d) the Bates Number range of the materials contained on such Production Media item; and (e) the Production Volume Number of the Production Media. The Producing Party shall accompany all document productions with a transmittal cover letter identifying by Bates number the documents produced. If the Producing Party produces documents via secure FTP site, the Producing Party shall specify the date through which the materials will remain available via the secure FTP site and the Producing Party shall, within a reasonable time, accommodate requests from another Party or Parties that documents be reposted to the FTP site.

## **VIII. THIRD-PARTY ESI**

29. A Party that issues a non-Party subpoena (the “Issuing Party”) shall include a copy of this Order and the order concerning confidentiality agreed and/or entered in this litigation with the subpoena and state that the Parties in the litigation have requested that third-Parties produce documents in accordance with the specifications set forth herein.

30. The Issuing Party shall produce a copy to all other Parties of any documents and ESI (including any metadata) obtained under subpoena to a non-Party.

31. If the non-Party production is not Bates-stamped, the Issuing Party will endorse the non-Party production with unique Bates prefixes and numbering scheme prior to reproducing them to all other Parties.

**IX. BEST EFFORTS COMPLIANCE AND DISPUTES**

32. The Parties agree to use their best efforts to comply with and resolve any differences concerning compliance with any provision/s of this Order. If a Producing Party cannot comply in a particular circumstance with this Order, such Party shall promptly inform the Receiving Party in writing why compliance with the Order is not reasonable or feasible. No Party may seek relief from the Court concerning compliance or non-compliance with the Order until it has met and conferred with the other Party in a good faith effort to resolve or narrow the area of disagreement.

**X. MODIFICATION**

33. This Order may be modified by a further stipulated order of the Parties or by the Court for good cause shown.

So Ordered.

9/30/2020

The Honorable Alison J. Nathan  
United States District Judge

Nothing in this Order affects the parties' obligation to comply with Rule 4 of the Court's Individual Practices in Civil Cases governing redactions and filing under seal, or with any of the Court's other Individual practices as relevant. SO ORDERED.

**Appendix A: ESI Metadata and Coding Fields**

<b>Field Name</b>	<b>Field Description</b>	<b>Populated For</b>	<b>Example Values</b>
BegDoc	Bates number of the first page of the document.	All	Prefix-0000000001
